

1. Go to <https://developer.apple.com/programs> and click on "Account" and log in. ("Account" is top right hand corner for me) Logging in will likely require two-factor authentication. When the account was created there was a "trusted device" or "trusted phone number" set to authenticate the account. You can read more about Two-Factor authentication here: <https://support.apple.com/en-us/HT204915>
2. You should see "Renew Membership" next to the iOS Developer Program Membership alert at the top, click that.
3. Then "Continue."
4. You should also see an option to setup auto-renewal if you want to do that.

Once paid the renewal with activate as soon as the current membership expires and you should receive two TSIs (apple Technical Support tickets that confirm the renewed status).
